

TZUY STEAM TURBINE ELECTRIC GENERATOR

using the TWIN-ROTOR TZUY TURBINE

A group of houses in a village can depend on this steam-powered electric generator. The barangay captain can lead the people to produce farm fuels and make someone operate it anytime when the need arises. They can enjoy the free electrical energy from their own local resources.

The advantage of steam-powered electric generator to the gasoline or diesel powered electric generator is that it can exist worry free in remote areas to generate electricity because of the bountiful farm fuels. It's so easy to boil water in a boiler to produce high pressure steam to spin the steam turbine coupled to the electric generator.

It can also be a back-up power or a stand-by electric generator during typhoons or during brown out especially at night when electricity is much needed. A single burner stove using the LPG, Liquefied Petroleum Gas can be a temporary solution during emergency to produce electrical energy.

This TZUY STEAM TURBINE ELECTRIC GENERATOR can be very attractive to foreign investors due to its unique simple design. Since its fuel is renewable the third world countries can benefit from this simple turbine technology.
